

Bearclaw Receives Report on Airborne Survey of Lov Property

Vancouver, British Columbia -- January 14, 2011

For Immediate Release

Bearclaw Capital Corp. (TSX-V: BRL and FSE: 5BQ) announces that the final report of the airborne geophysical survey conducted in October 2010, on the company's Lov property has been received. The survey, which involved low-level, high resolution airborne MAG and EM flown on 100 meter spaced lines was conducted by Areoquest Limited, a Vancouver based geophysical company.

Located 30 KM west of Cranbrook, B.C. and 15 KM northeast of Eagle Plains' Iron Range project, the Lov property consists of 197 Claim units and covers Lower Cambrian sediments intruded by Cretaceous granite intrusions. Prior work has identified a 2.5 Kilometer long molybdenum copper soil anomaly within which is a tungsten, arsenic, bismuth anomaly, in addition, a more linear gold soil anomaly crosses the property.

Analysis of the airborne results, together with prior data from the property, will be assessed by the company to further define potential drill targets for the anticipated drilling program in the spring/summer of 2011.

Mr. Doug Anderson, P. Eng. is the qualified person as defined by National Instrument 43-101 and supervised the preparation of the technical information in this release.

The TSX Venture exchange does not accept responsibility for the adequacy or accuracy of this release.
